

JAHIAH SAMPIERI

jahiahsampieri@gmail.com | linkedin.com/in/jahiahsampieri/

EDUCATION

University of San Diego - Shiley-Marcos School of Engineering

August 2022 - May 2026

Major: Computer Science | Minor: Information Technology Management

LEADERSHIP

Association for Computing Machinery – Secretary

August 2025 - Present

- Maintain accurate records, meeting minutes, and organizational schedules to support smooth club operations.
- Facilitate communications between members, manage correspondence, and coordinate administrative logistics.

WORK EXPERIENCE

City of New Haven - Information Technology Intern

June 2025 - August 2025

- Migrated reports from Crystal Reports to Microsoft Report Builder, ensuring data accuracy and formatting consistency throughout the transition.
- Reviewed and interpreted SQL queries to validate correct data integration across reporting systems.
- Designed a GIS process flowchart in Microsoft Visio to support system documentation and workflow mapping.

PROJECT EXPERIENCE

Data Science - Video Game Project

August 2025 - Present

- Sourced and processed a large video game dataset from Kaggle using Python and pandas to prepare data for analysis.
- Applied data preprocessing and feature engineering techniques to identify key variables influencing game success across genres and platforms.
- Built and evaluated statistical models using Python (scikit-learn) to surface actionable insights; visualized findings through graphs to communicate data-driven recommendations.

Food Nutrition App - Full-Stack Development

August 2025 - Present

- Developing a full-stack app using React and MongoDB that enables students to scan meals and receive detailed nutritional reports.
- Contributing primarily to frontend development using React, with supporting backend work in MongoDB.
- Collaborated with team members on backend image recognition features, including model retraining to improve accuracy over time.

Block Game - AI-Assisted Personal Project

- Designed and developed an interactive block-placement puzzle game using HTML, CSS, JavaScript, and Python, leveraging AI tools throughout the development process.
- Built a real-time point-tracking system and animated progress bar to reward player engagement and encourage replay ability.
- Crafted a visually engaging, accessible interface with intuitive gameplay focused on fun and usability.

Language Learning App - User-Centered Design Course Project

August 2025 - May 2026

- Collaborated on a semester-long team project applying the full UCD process, conducting low-fidelity and high-fidelity prototyping iterations to refine design decisions based on user feedback.
- Designed and delivered a high-fidelity Figma prototype for a language learning app, incorporating translation features and intuitive UX patterns to support diverse learners.

SKILLS

- Programming: Java, Python, JavaScript, HTML, CSS
- Web Development: React, Node.js
- Design: Figma
- Database: SQL
- Reporting Tools: Microsoft Report Builder (SSRS)
- Certifications: Microsoft Office Specialist - Excel Associate
